

Juan Manuel Gomariz

Speech AI Evaluation Specialist | AI Quality Assurance | Data Annotation

Río Tercero, Córdoba, Argentina
ingjuangomariz@gmail.com | +54 9 351 3157202
Portfolio: wolfim.com | korantis.com | roggeroyroma.com

Professional Summary

AI Evaluation Specialist with **3+ years of hands-on experience building and operating multi-agent AI systems**, evaluating AI-generated outputs, and performing structured quality assurance on AI model responses. Architected **Hermes**, a production multi-agent orchestration system that coordinates 9 specialized AI agents with defined evaluation protocols, quality gates, and feedback loops. Native Spanish speaker (LATAM) with advanced English proficiency (B2-C1). Experienced in data annotation pipelines, AI response rating frameworks, and following strict evaluation guidelines. Ready to apply real-world AI quality assessment skills to improve speech AI models.

AI & Evaluation Skills

Category	Skills
AI Response Evaluation	Rating AI outputs on relevance, accuracy, clarity, tone; rubric-based assessment; structured feedback writing
Prompt Engineering	Crafting evaluation prompts for 9+ specialized AI profiles; contract-based system prompting (SOUL.md); chain-of-thought evaluation frameworks
Data Annotation & Labeling	Lead qualification tagging; venue data categorization; AI output quality labeling; batch data processing
Quality Assurance	Multi-agent audit workflows; automated quality gates; handoff verification protocols; pattern-based error detection
AI/ML Familiarity	LLM evaluation (Claude, GPT, DeepSeek); vision model assessment (M3); model output comparison; token-usage optimization
Voice & Conversational AI	WhatsApp bot integration (YCloud API); voice conversation scenarios; conversational AI evaluation frameworks
Data Collection & Processing	Web scraping pipelines; structured data enrichment; batch processing (25+ venues); Supabase database management
Documentation & Reporting	Detailed evaluation reports; Excel-based tracking; Notion/Google Workspace collaboration; Obsidian knowledge management

AI Projects & Experience

Hermes Multi-Agent AI System — Lead Architect & Operator

Self-directed project — 2024 to Present (active daily)

Designed, built, and operate a **production multi-agent AI orchestration system** that coordinates 9 specialized AI agents with distinct evaluation responsibilities:

- **Agent Architecture:** Created 9 specialized AI profiles (brain-vps, brain-local, wolfim-growth, ango-commercial, construvial-growth, korantis-ops, web-builder, web-auditor, pc-ops), each with contract-based behavioral instructions defining evaluation criteria and quality thresholds
- **AI Quality Control:** Built a **dedicated web-auditor agent** that independently evaluates AI-generated code and content against predefined quality rubrics — mirroring the exact workflow required for Speech AI evaluation
- **Response Evaluation Protocols:** Designed structured handoff verification protocols where AI outputs are evaluated against acceptance criteria before being approved for production use
- **Prompt Quality Assessment:** Continuously evaluate and refine prompts across 9+ specialized contexts, assessing response quality, relevance, accuracy, and adherence to guidelines
- **Pattern Recognition:** Developed pattern-detection systems that identify recurring AI errors, hallucinations, and quality deviations — feeding corrections back into agent instructions
- **24/7 Autonomous Operation:** Deployed on VPS with cron-based autonomous execution, Telegram alerting, and Git-synchronized knowledge management via Obsidian vault
- **Evaluation Frameworks:** Created rubric-based evaluation systems for commercial proposals, code quality, data accuracy, and response appropriateness

Key Technologies: Hermes Agent (Nous Research), Claude, GPT-4, DeepSeek, Python, Supabase, Git, Linux VPS, Docker, Telegram API, Obsidian

Wolfim — AI-Powered Web Agency

Founder — 2025 to Present

Built an AI-assisted web development business with integrated AI evaluation workflows:

- **AI-Assisted Development:** Use LLM-based agents (web-builder) to generate website code, which is then independently audited by a separate AI agent (web-auditor) — creating an **AI generates → AI evaluates → human approves** pipeline
- **Automated Outreach Pipeline:** Built an end-to-end AI-powered lead generation system: `dork_scout → wa_checker → enrich_leads → campaign.py → cron` — processing and evaluating 122+ leads with AI-driven qualification and annotation
- **Email Campaign Evaluation:** Designed and monitor AI-personalized cold email campaigns (Resend API), tracking response quality and iterating based on performance data
- **WhatsApp AI Integration:** Integrated YCloud WhatsApp API for AI-assisted conversational outreach, requiring evaluation of bot response quality and conversation flow
- **Client Projects:** Delivered websites for real estate and commercial clients using AI-assisted development with human-in-the-loop quality evaluation. Notable projects include **roggeroyroma.com** (real estate site with catalog, CRM integration, and VPS backup system) and multiple real estate lead proposals generated with AI-assisted commercial analysis
- **Financial Results:** Generated \$1,000+ USD/month through AI-optimized commercial workflows

Key Technologies: Next.js, Supabase, Resend API (wolfim.com email infrastructure), YCloud API (WhatsApp), Cloudflare, Make.com, Google Workspace, Excel

Korantis — AI-Powered Venue Intelligence (korantis.com)

Founder — 2025 to Present

Created an AI data pipeline for venue discovery and evaluation:

- **Model Split Architecture:** Designed a two-stage AI pipeline where a text model (M2.7) pre-screens venues, and a vision model (M3) evaluates interior photography quality — reducing vision API calls by 83.3% while maintaining evaluation accuracy
- **Data Annotation:** Curated and labeled datasets of 25+ Buenos Aires venues, tagging attributes such as venue type, atmosphere, capacity, and photo quality
- **AI Vision Evaluation:** Developed criteria for AI vision model assessment of venue interiors, establishing quality thresholds and evaluation rubrics
- **Quality Assurance:** Validated AI-generated venue assessments against ground truth, identifying model strengths and failure modes
- **Batch Processing:** Built automated batch evaluation workflows processing multiple data points with consistent quality standards

Key Technologies: Python, AI Vision APIs, Supabase, Data Curation Tools

Independent Financial Markets Analyst

Self-directed — 2018 to Present

- Evaluate market data using **AI-assisted structured decision frameworks**
- Maintain detailed evaluation records with rule-based assessment processes
- Apply pattern recognition and analytical thinking to complex data evaluation

Technical Skills

- **AI/LLM Platforms:** Hermes Agent, OpenAI (GPT-4), Anthropic (Claude), DeepSeek, AI Vision Models
- **Prompt Engineering:** Contract-based system prompts, chain-of-thought, structured evaluation prompts, few-shot prompting
- **Data & Automation:** Python (AI-assisted), Supabase/SQL, Make.com, cron automation, web scraping
- **Business Tools:** Excel (advanced), SAP, Power BI (basic), Google Workspace, Notion, Slack
- **Web Technologies:** Next.js, Docker, Git, Linux VPS administration, Cloudflare, API integrations
- **Quality & Documentation:** Rubric design, structured feedback, Obsidian knowledge management, detailed reporting

Languages

Language	Level	Details
Spanish	Native	LATAM (Argentina). Full professional proficiency in all contexts.
English	B2-C1 (Advanced)	Reading complex technical documentation daily. Writing evaluation reports and technical instructions in English. Conversational proficiency for voice interactions.
Portuguese	Basic	Reading comprehension

Education

Industrial Engineer — Universidad Católica de Córdoba, Argentina

Engineering background with strong foundations in: process optimization, quality control systems, statistical analysis, structured evaluation methodologies, and technical documentation.

Why I'm a Strong Fit for Speech AI Evaluation

1. **Real AI Evaluation Experience:** I don't just use AI — I actively evaluate AI outputs daily through my multi-agent system. I've built quality gates, assessment rubrics, and feedback loops that mirror the exact workflow RWS requires.
 2. **Native Spanish + Strong English:** I'm a native LATAM Spanish speaker from Argentina who works daily in English — reading AI documentation, writing evaluation prompts, and communicating technical concepts. I can evaluate Spanish-language AI speech with native-level intuition.
 3. **Following Guidelines is My Operating System:** My entire Hermes system runs on contract-based protocols (SOUL.md). I'm trained to follow detailed evaluation guidelines precisely, document deviations, and provide structured, objective feedback — not subjective opinions.
 4. **Data Quality Mindset:** From annotating venue datasets to qualifying leads to evaluating AI code quality, I approach every task with a quality-first, rubric-driven methodology. I understand that consistent, accurate evaluation is the foundation of AI improvement.
 5. **Self-Directed & Reliable:** I've built and operate a complex AI system independently. I manage my own time, meet deadlines, and deliver consistent quality without supervision — essential for remote, flexible-hour contract work.
 6. **Analytical Rigor:** My engineering background trained me in systematic evaluation, pattern recognition, and data-driven decision making. I don't guess — I assess against criteria and document my reasoning.
